"By failing to examine the interplay of powerful economic actors in the 'real life' economy, the processes of market rigging, financial manipulation, and fraud, are overlooked" [The Global Economic Crisis: The Great Depression of the XXI Century (2010), Michel Chossudovsky and Andrew Gavin Marshall Editors, pg xviii]

Market Rigging. Financial Manipulation. Fraud. Are these terms presented to investors by their advisors when disclosing various risks they will face when placing their funds in various investment pools or trading strategies? Sadly, in the 4 years since the crash of 2008, we have seen more debt schemes thrown at capital markets in an attempt to "save" the markets than every in history, and I would dare say, the three terms above are rarely discussed between investors and advisors. Whether examining behavior in European, US, or Chinese capital markets, one can see these immoral behavior patterns apply worldwide.

The environment we have lived through since being "rescued" from the crisis in 2008, has pushed the world further from the idea of capitalism than any time on record. After living through the two largest stock market busts in American history since the 21st century began, the solution continues to be to increase the "stimulus" or "quantitative easing", which are all at the root level the same; create more debt to deal with yesterday's debt problems. If we continue repeating the word "recovery", millions will continue to live in denial right up until the day the TV hosts says, "Good Evening, your world has changed."

If you are reading this article, I know that you have broken out of this denial, and are seek to gain an understanding of major signals traders and investors should consider today when trying to avoid the "they will always print, thus my account will always go higher" lie. Markets have always had individuals and powerful players who have sought to sell before the crowd. The trouble with today's misinformation culture is that it refuses to warn investors that their managers are dealing with more market rigging, financial manipulation and fraud than ever in their careers. This *punishes* the managers who have planned for a major

economic slowdown and the repercussions of the largest debt overhang in history, and *rewards* those who parrot the lie of central planners that more intervention and debt will eventually lead us back to "stability". It really is remarkable to read commentary week in and week out from individuals managing billions who repeat "the central banking party" line. Of course, we are all fortunate at times like these, there are others who see it as their moral duty to warn investors and the public at large to use their minds, rather than abdicate that task over to central bankers and their financial industry and media lackeys.

## **Hypothesis**

In this article, I wish to have you consider the idea that the public is fed headlines that sound dire (because we ARE facing major negative headwinds), while at the same time tools are used that push markets up into the "the announcement". The result, is that the public is being given the false impression that without a constant stream of interference by global central bankers and politicians, their lives would not go on as "normal".

If the old adage of buy low, sell high, is still applicable to all investors and traders today, then a closer look of "announcements" made in the last year would seem to be the place to start.

**Four Charts from Three Previous Articles** 

[From Darwin's Dangerous and Deceptive Devices, Public Article, 10/27/11]

[Making Our Lives Stable, Public Article, 3/2/12]

[Two Charts Above From *Powder Kegs and Photo Ops*, Public Article, 9/19/12]

I start with the period since the May 2, 2011 top, since it has been the most frustrating in my career in the attempt to find "the top" of credit bubble three. On May 2, 2011, I released the article, *The Gallery of Crowd Behavior Returns*. If you look up this article, you will find that it was my opinion that the US dollar was at a major bottom and the Euro was at a major top at that time. The charts were produced on May  $2^{nd}$ , when the Euro hit an intraday high of 149.02, and the

US Dollar hit a low of 72.72. Two days later, on May 4<sup>th</sup>, the Euro hit its highest level (149.40) and the US Dollar hit its lowest level (72.70) since the spring of 2009. 18 months later, these highs and lows are still in place. However, finding the FINAL top on the current stock market mania has been exhausting, and yet like any tool used by traders, if you keep studying and looking at this beast called global markets, you will GAIN insights the longer information develops around you. Inevitably, you will discover more insights you can use in the future.

## Three "Announcements" between Oct '11 and '12

The first chart in the previous section was released on Oct 27, 2011. The following are my remarks after ALL investors had watched a powerful 18-day global rally.

"In the last month, investors have read headlines like <u>Europe has six</u> weeks to find debt crisis solution, warns Chancellor George Osborne (Sept 23), <u>In the Absence of a Credible Plan we will have a Global Financial Meltdown in Two to Three Weeks, [states] IMF Advisor</u> (Oct 6), and <u>G20 Tells Eurozone to fix debt crisis in 8 days</u> (Oct 16). As I release this article, a headline reads, <u>S&P 500 Extends Best Month Since '74</u>, <u>Euro Rises on Debt Accord</u>, proving that the deal completed last night in Europe was "a success". The worst is now behind us. I guess the "crisis" was all just hype, right?" [*Darwin's Deceptive and Dangerous Devices*, Oct 27 '11]

Let's examine what happened in the S&P 500 in the month AFTER the "euro was saved" announcement on October 27th.

The second of the four charts in the previous section was released on March 2, 2012. The following reveals the history leading up to the start of March.

"On October 27th, 2011, I released the article *Darwin's Deceptive and Dangerous Devices*. That day, 'European leaders expanded a bailout fund to stem the region's debt crisis', and headlines read "S&P 500 Extends Best Month since '74, Euro Rises". In less than 2 months, on December 21st, the leaders at the European Central Bank hit the electronic switches and handed out € 489 billion Euros (\$639 billion) to hundreds of banks across Europe to 'shore up the financial system'. This was the largest infusion of credit by the ECB into the banking system in the 13-year history of the euro currency. The last day of February, headlines read, "ECB Hands Out \$712 Billion in Loans to Banks" and we learned that in a little over two months, more than € 1 trillion (€ 489 billion on Dec 21st + € 529.5 billion on Feb 29th) had been "pumped into Europe's financial system" in an "attempt to stabilize banks, governments and businesses". [Making Our Lives Stable, 3/2/12]

If we develop a chart of the Dow Jones World Stock Index around this time period, we can see a similar pattern. While this event did not produce the actual top, it was less than 1% from the top that came within the next month.

Now we come to the last two of the four charts found in the previous section. The following is a comment of <u>Dr. Janice Dorn, who has coached hundreds of professional traders spanning 2 decades</u>. (Her background is listed in Powder Kegs and Photo Ops). Her response was in conjunction with my comments about how we as individuals get accustom to having safety nets being provided by the government.

"Dr. Dorn - I agree, something's got to give. What happens in a situation like this is very interesting. When people are not thinking about how something is provided for their benefit - just expecting it to continue - they come to the conclusion that somebody else is going to take care of them; somebody else is going to think for them and tell them what to do, where to go, and what to take on a plane... So the more the government keeps establishing and/or expanding programs that will "protect us," the more people feel this sense of security. Of course, this sense of security is completely false, and in the process, freedoms are taken away from us."

After Draghi's announcement of "unlimited bond purchases (with conditions)" on Sept 6<sup>th</sup>, and Bernanke's QEIII announcement on Sept 13<sup>th</sup>, we can see looking back over the last 2 months, the S&P 500 topped and Treasuries bottomed on September 14<sup>th</sup>, the premise released in my Sept 19, 2012 article.

What is beyond belief, is that living in a country that prides itself on freedom and the free enterprise system, I have seen very little commentary to the fact that worldwide, the public, whether insider or outside of the world of finance, has grown to believe that central banking schemes and a destruction of free markets *long-term* is good for our own *long-term* financial goals. It is like we have established a welfare investment class since 2008. We have been willing to give

up our long-term freedoms for the short-term pleasure of rising markets on even faster rising debt levels.

If the poor have been groomed to be dependent on the state, and the middle to upper class in the last 4 years has been groomed to believe they will not continue to be wealthy without an ever expanding role of central bankers and debt, is it not possible that once a political objective has been reached, we will start hearing even more rhetoric from these central planners about how they can't save the system unless government slashes more and more programs in order to pay the "too big to fail" elites at the top of the global debt system?

## "They Can Keep It Up Until the Election"

Now we come to the most recent "announcement". I have been amazed how this idea has been repeated to me over and over again since the spring, and how right it has proven to be. However, the reaction of the Dow today, November 7, 2012, also seems to support the idea of "sell the announcement". Look at the chart below of the Wilshire 5000, the most widely used index when seeking to attain an approximate value of publicly traded stock wealth on U.S. exchanges, and the increase in US national debt since the 2011 high on May 2<sup>nd</sup>.

With US national elections behind us, and the two most powerful central bankers in the world, Draghi at the European Central Bank and Bernanke at the Federal Reserve, recently releasing their "all in" strategies of stimulus before September 14<sup>th</sup>, and the fiscal cliff (a \$600 billion package of tax increases and spending cuts scheduled to take effect at the end of 2012, 54 days from now), I can not think of a more crucial time to wake up to the REAL world of finance, and listen to the "announcement" that capital markets are making today.

In 1987, 25 years ago, there were warnings ahead of time for investors. Recently, I placed the chart below on the <u>Best Minds Inc Weekly page</u>. It would appear that even history is making an announcement to investors willing to awaken from the central banker's investor welfare state of denial.

"Do not store up for yourselves treasures on earth, where moth and rust destroy, and where thieves break in and steal. But store up for yourselves treasures in heaven, where neither moth nor rust destroys, and where thieves do not break in or steal" [Matthew 6:19,20 – Written in the 1st century AD. Seems very applicable to our world today, don't you think?]
